WHAT YOU SHOULD KNOW ABOUT BONDEX CEMENT PAINT . . .

The unique properties of BonDEX have made it known the world over as the outstanding beautifying and protective coating for Homes, Stores, Hotels, Factories, Swimming Pools, Silos, etc. BonDEX bonds with the wall surface and seals up the cracks and pores through which moisture penetrates.

HOW TO APPLY BONDEX

To use BonDEX on stucco, concrete, brick, concrete block or masonry, just mix it with water in proportions specified on the package and apply with brush or spongy. No special skill is needed. On porous surfaces (such as rough concrete, unpainted stucco, concrete or cinder block, etc.) always use two coats of BonDEX. Where the surface is non-porous (smooth troweled masonry, asbestos siding, brick, etc.) use one coat of BonDEX Primer and follow with a single finish coat of BonDEX.

Printed in U.S.A.

1 part 108—10 parts 101

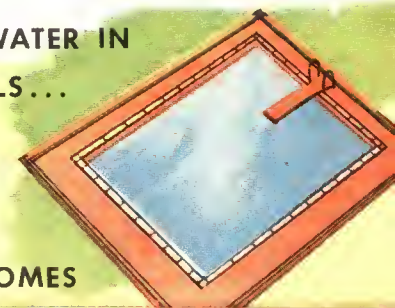

1 part 112—1 part 114

FACTORS THAT AFFECT COLORS

Owing to the varying porosity and suction in stucco, cement and masonry surfaces, the colors will vary in depth of tone on different surfaces.

The colors shown on this color card represent two-coat applications on average surfaces. A one-coat application will be deeper in shade, as the second coat dries out lighter than the first.
